

AEROS - Your own local water source

RAINMAKER
HOLLAND

Reserve one of the first twenty AEROS systems

AEROS produces water locally from moisture in the outside air. It is designed for locations seeking to reduce dependence on bottled water, tanker deliveries or vulnerable infrastructure. Actual output depends on temperature, relative humidity, operating hours and site conditions.

Founding Customer Offer

Fixed system price: €14,750. No introductory discount applies. The first twenty customers receive one year of Continuity Care, priority commissioning support and direct access to the Rainmaker product team, as specified in the final Order Confirmation.

Payment Milestones

Milestone	Amount – EUR bank transfer only
On signing / reservation	€475
After Production Start Notice (7 calendar days)	€4,925
After Ready for Dispatch Notice (7 calendar days; before release)	€9,350 plus VAT
Before transport booking	100% of accepted freight quotation

Transparent Delivery Costs

Rainmaker obtains an insured, destination-specific freight quotation and submits it for approval before booking. For international business end customers, the standard is DAP at the exact customer location (Incoterms® 2020): Rainmaker arranges transport and bears risk until arrival; the customer handles and pays import clearance, duties, taxes, unloading and site access. Consumers receive one total price including mandatory delivery costs before ordering.

First: Site & Climate Assessment

Rainmaker assesses the proposed location, climate data, power supply, water demand, access and local requirements. The result is a forecast, not an output guarantee. Water may be used for drinking only following correct commissioning, maintenance and any locally required water testing.

Next Step

Sign the separate AEROS Pre-order Agreement. That agreement, the Order Confirmation and its schedules contain the binding terms. This offer is commercial information only and does not itself create a contract.
